EXECUTIVE SUMMARY

2008 Survey of States Providing Resource Facilitation for Individuals with Traumatic Brain Injury and Family Members

Voluntary Resource Facilitation Survey

The TBI Lead Agencies of the 50 States, five Territories and the District of Columbia were invited to participate in a voluntary survey on resource facilitation for individuals with Traumatic Brain Injury (TBI) and family members.

Survey Process

The survey was conducted through an online format called Survey Monkey. Due to the limitations of the survey instrument only one person was able to enter all the information from the State or Territory.

Survey Definition

Resource facilitation for Individuals with TBI and Family Members begins with the basic process of assessing an individual's needs and the provision of information and referral. Dependent upon the availability of resources, resource facilitation may also include advocating for, obtaining, and accessing services and supports, routine follow-up, and reassessment to determine additional needs, the efficacy of existing services and supports and/or the termination of services.

40 States Provide TBI Resource Facilitation

Forty eight (48) out of 57 potential States/Territories responded to the survey. The “Survey Findings” document reflects the responses of 40 States who indicated they provide resource facilitation for individuals with brain injury and family members.

Two thirds of the respondents were from the States’ Lead Agencies¹ and approximately one third of the respondents were from Brain Injury Association of America (BIAA) Chartered State Affiliates at the request of or on behalf of the State. (See Figure 1)

Resource Facilitation Services Increase

Since the year 2000 publication of the *Resource Facilitation: A Consensus of Principles and Best Practices to Guide Program Development and Operation in Brain Injury*,² there appears to be an increase from 28 percent or 16 programs providing resource facilitation to 70 percent in 2008.

¹ A TBI Lead Agency is the designated State agency that has the primary programmatic role for guiding the development of TBI services and supports in the State by developing and maintaining partnerships with other State agencies and stakeholders and providing leadership for policy development to develop and sustain TBI services and supports

² Compiled and published by the Brain Injury Association of America through a cooperative agreement with HRSA’s MCH, Federal TBI Program.

States' Responses to the Resource Facilitation Survey

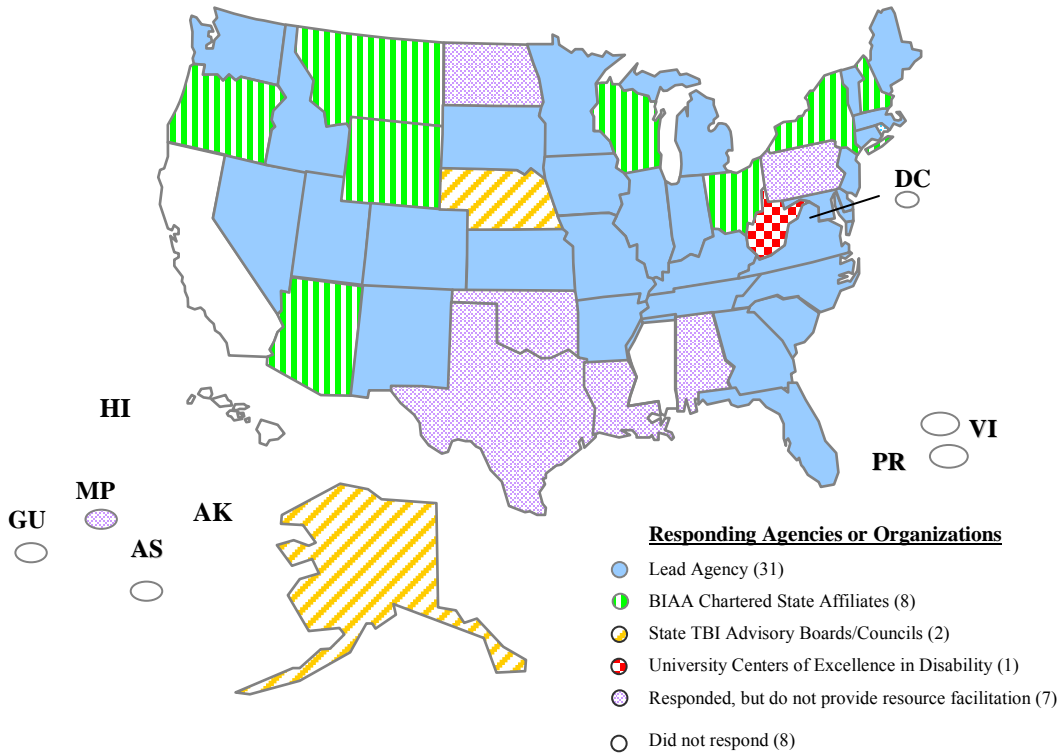

Figure 1
Framing the Resource Facilitation Snapshot

The goal of the survey was to have a “**snapshot**” of resource facilitation³ services across the country. To frame this snapshot, eight overarching questions were developed that formed the premise for the subsequent survey instrument.

Question #1

What is going on in the States with respect to resource facilitation?

Responsibility for Planning and Delivery of Resource Facilitation Services

The planning of resource facilitation appears to be a shared collaboration with multiple partners. The majority of partnerships include the TBI Lead Agency, BIAA Chartered State affiliates and the Statewide TBI Advisory Board or Council. Lead Agencies may be the catalyst for the planning of resource facilitation services, but the BIAA affiliates provide 70 percent of the resource facilitation services across the country. (See Figure 2)

³ For purposes of brevity, please note that all references to Resource Facilitation services are in the context of providing the services for individuals with TBI and family members.

Point of Entry/Access to TBI Resource Facilitation Services

The TBI Lead Agencies provide the largest share of entry or access points for TBI resource facilitation services with the BIAA affiliates as the second most used points of entry. Other entities also provide points of entry indicating there are multiple ways in which individuals with TBI and family members are able to access entry into the State’s resource facilitation services.

The Funding of TBI Resource Facilitation Services

The survey results indicate that State general revenue is the primary source of funding for over half (56 percent) of the States. Other funding is provided by a variety of sources ranging from Federal grants, brain injury trust funds, BIAA affiliate operating budgets and/or State agency budgets.

Question #2

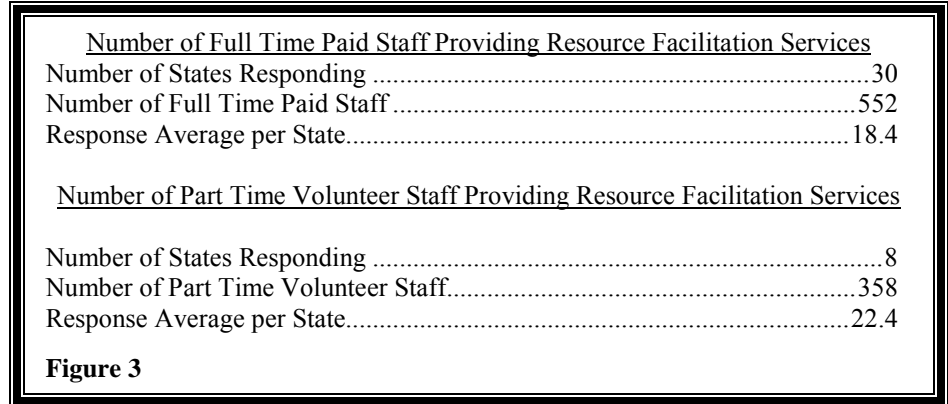

What are the Numbers (Demographics)?

Numbers Being Served and Staff Providing Resource Facilitation Services

The current nationwide data sample of individuals receiving some type of resource facilitation in 2007 is 40,878 which averages out to 1319 individuals per State. For these 40 thousand plus individuals there is a limited amount of paid full time staff providing resource facilitation services. A significant number of States continue to rely on part time volunteer staff to provide these services. (See Figure 3)

Data Collection Issues and Methods

Currently there is no consistent or uniform set of resource facilitation data being collected nationwide. To get a fuller, richer picture of the data, respondents were asked to indicate whether they collect family/caregiver and follow-up data. Fewer than 40 percent of States collect follow up data on the individuals with TBI that receiving resource facilitation services. Slightly more than half of the respondents collect data on issues affecting family and/or caregivers as a result of the brain injury.

Question #3
What Models Were Used to Develop Resource Facilitation?

Currently there is no one consistent model being used to develop resource facilitation services but “Consultation with other programs” was reported by 75 percent of the States. This may imply that States are looking to other programs in their own States and by doing so; it may lead to uniformity and continuity of services across State systems as well as a cost saving method as States may not be reinventing the wheel.

Question #4
What Types of Resource Facilitation Services Are Being Provided Across States?

There were 27 possible survey choices covering the range of resource facilitation services. The survey results show a distinct difference from the **six** primary resource facilitation services outlined in *Resource Facilitation: A Consensus of Principles and Best Practices to Guide Program Development and Operation in Brain Injury*. States appear to be functioning at a basic level or layer as they are primarily providing information and referral services and have not matured into services that provide a greater level of intensity, depth and resources.

Question #5
What Information Would Allow for Comparison, Contrast and the Demonstration of Diversity among Resource Facilitation Programs?

What’s in a Name?

States use a variety of names which in many cases are the functions of resource facilitation. The name “Resource Facilitation” may not be more recognizable since the publication of the 2000 *Resource Facilitation: A Consensus of Principles and Best Practices to Guide Program Development and Operation in Brain Injury*, but the survey results indicate these services are being provided regardless of what it is called.

Person and Family Directed Services

The telephone is the primary method reported by the States for initial assessment and data collection. This method may be considered one-to-one or person-to-person contact but there is little clarity in the survey results on the depth of person and family directed resource facilitation services and supports provided across the States.

Question #6
How is Resource Facilitation Carried Out?

Collaborations and Contracts

The backbone of successful resource facilitation is collaboration with a multitude of partners. Over 90 percent of the States have collaborative relationships with sister State agencies, their BIAA Chartered State affiliate and many community partners. In addition to the collaborations, about two thirds of the States have developed a formal contractual relationship with a community based provider and/or the BIA affiliate.

Paying for Resource Facilitation

Forty percent of the States indicate they use sole source funding. However, it is unclear from the survey results whether the provision of resource facilitation incorporates multiple funding sources as some States marked both sole source and an additional selection. States' responses may also be a reflection of their respective service delivery systems in which TBI resource facilitation is incorporated.

How is Eligibility Determined?

Eligibility requirements for resource facilitation services appear to range from stringent eligibility criteria to those that are inclusive and broad based.

One-on-One Resource Facilitation Service Delivery

Sixty four percent of the States indicate they deliver resource facilitation services as a result of a one-on-one process which may be either by telephone or home visitation.

Question #7 How is Success Measured?"

Risk Management

Over half of the States indicate they have risk management policies in place which may indicate resource facilitation is more formalized with systems are in place to help reduce liability and track the success resource facilitation services.

Determining the Individual Has Reached the Desired Outcome

States use attainment of agreed upon goals or satisfaction surveys to measure success of the service as both methods are indicators of whether a service was beneficial and the desired outcome was reached.

Question #8 How are States Strategically Planning for Sustainability of Resource Facilitation Services?

Strategically Planning and Eliciting Funding

The results to this question are somewhat surprising as pre-survey thinking speculated the majority of responses to planning for sustainability would be: "To Continue Funding." Surprisingly, "To Increase Levels of Services" is the most frequently selected response. A presumption can be made that funding for resource facilitation is available therefore increasing services may take precedence. To accomplish their strategic plans for sustainability, 69 percent of the States have both personal meetings with their legislators and provide data to demonstrate the need for resource facilitation services.

Observations and Conclusions

1. There was an exceptional survey response.
2. There is an increase of resource facilitation services since 2000.
3. There is no uniform name by which resource facilitation is recognized State-to-State and within States.
4. Brain injury resource facilitation service delivery is primarily provided by the Brain Injury Association of America Chartered State Affiliates.
5. State general revenue is the primary funding source for resource facilitation.
6. There is no required or uniform data set for resource facilitation services.

Many Thousand Thanks to:

All the States who took the time to provide their State's snapshot of resource facilitation services for individuals with TBI and family members and to the Person and Family Directed Services work group of HRSA's Federal TBI Program's TBI Technical Assistance Center who have given so freely of their time and commitment in developing the survey instrument and in analyzing the results.

2008 Survey of States Providing Resource Facilitation for Individuals with Traumatic Brain Injury and Family Members

I. INTRODUCTION

The Resource Facilitation Committee of the Person and Family Directed Services Focus Area Work Group⁴ conducted a voluntary resource facilitation Survey in July, 2008. All 50 States, five Territories and the District of Columbia were invited to participate by providing information on resource facilitation services for individuals with Traumatic Brain Injury (TBI) and family members in their States/Territories.

The goal was to have a snapshot of resource facilitation⁵ services across the country. To frame this snapshot, the following eight questions were developed.

1. What is going on in the States with respect to resource facilitation?
2. What are the numbers (demographics)?
3. What models were used to develop resource facilitation?
4. What types of resource facilitation services are being provided across States?
5. What information would allow for comparison, contrast and the demonstration of diversity among resource facilitation programs?
6. How is resource facilitation carried out?
 - a. What collaborations and partnerships are needed - investments with other entities?
 - b. How are resources allocated?
7. How is success measured?
8. How are States strategically planning for sustainability of resource facilitation services?

These eight questions were addressed in three sections with 19 Administrative and Operational Overview questions, four Funding, Sustainability and Strategic Planning questions, and eight in Data Collection for a total of 31 survey questions.

The survey was offered through an online format called Survey Monkey. As the instrument was not designed to sort by the name of the State, only one person from each State entered all the information from the State. For 31 States, the Lead Agency⁶ was the respondent. The Lead Agencies were encouraged to invite all the providers of resource facilitation services in their State to participate. However it is unclear if the Lead Agency was able to incorporate information from all the providers of resource facilitation. The same issue is true for the eight States whose Brain Injury Association of America (BIAA) Chartered State affiliates responded

⁴ The work group is based on one of the three guiding principles of the Federal TBI Program: Person and Family Directed Services. The work group's activities and projects are coordinated by HRSA's Federal TBI Program, TBI Technical Assistance Center at NASHIA (National Association of State Head Injury Administrators).

⁵ For purposes of brevity, please note that all references to resource facilitation services are in the context of providing the services for individuals with TBI and family members.

⁶ A TBI Lead Agency is the designated State agency that has the primary programmatic role for guiding the development of TBI services and supports in the State by developing and maintaining partnerships with other State agencies and stakeholders and providing leadership for policy development to develop and sustain TBI services and supports

on behalf of their respective States. Because of this the entity that is actually providing resource facilitation services is not always clear.

Resource Facilitation Definition

The work group recognized that resource facilitation may be called different names within the State and State-to-State. It is sometimes recognized by the functions that are provided in various contexts. For this reason, the following definition was developed in to have a common reference point for resource facilitation and was provided for respondents at the beginning of the survey instrument.

“Resource Facilitation for Individuals with TBI and Family Members begins with the basic process of assessing an individual's needs and the provision of information and referral. Dependent upon the availability of resources, resource facilitation may also include advocating for, obtaining, and accessing services and supports, routine follow-up, and reassessment to determine additional needs, the efficacy of existing services and supports and/or the termination of services.”

Presentation of the Survey Results

Most of the survey questions had the option to “Check all that apply.” In theory this was an attempt to capture the richest data. In practice it clouded the data on several occasions. Because respondents were able to check all that applied, the average number of responses per question is presented in the narrative and the accompanying tables/charts in the reference section of this document. There is a minimal amount of data filtering only when the data are clean and present a more complete picture.

For readability and a logical flow of information the survey results are presented in the appropriate section that corresponds to one of the eight questions upon which the survey was based. The discussion around each question generally contains only the three most frequently selected responses. To review all the results to a specific question, a table or chart is provided in the reference section along with the full survey instrument at the end of the document.

Many of the questions had a section called “Other” in which respondents could add information, clarify their responses or provide new ideas or methods. These responses are frequently included in the narrative along with the results as a way to provide the richest picture from the responses. These responses will generally be incorporated at the end of a section and the header will read, “Other Responses to the Survey Questions:” followed by the survey question.

These survey results will help to establish the 2008 snapshot of “what is going on with respect to resource facilitation” for individuals with TBI and family members across the country.

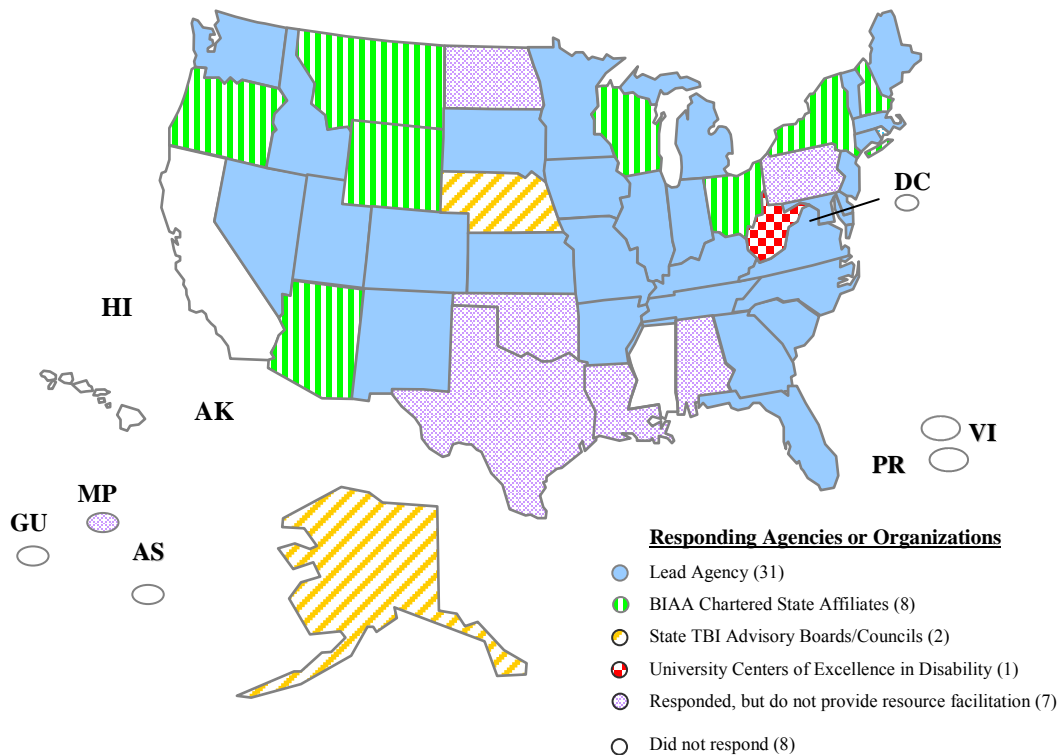

II. SURVEY FINDINGS

Forty eight (48) out of 57 potential States/Territories responded to the survey which is a response rate of 94 percent. The map shows that 83 three percent of the 48 responding States indicated they provide resource facilitation services in their State. Seven (7) States and one Territory (17 percent) indicated they do not provide services as defined in the resource facilitation Survey.

All the “Findings” in this report are based on 40 States or 83 percent of the total that responded “Yes” to “Is resource facilitation for individuals with brain injury and family members provided in your State?” The responses from the States that are not providing resource facilitation are not included in the findings.

The following map provides the picture of which States/Territories responded and the entity that entered the survey data.

States’ Responses to the Resource Facilitation Survey

Since the year 2000, and the publication of the *Resource Facilitation: A Consensus of Principles and Best Practices to Guide Program Development and Operation in Brain Injury*,⁷ there appears to be an increase from 28 percent or 16 programs providing resource facilitation for individuals with TBI and family members in 2000 to 70 percent (40 States responding) in 2008.

⁷ Compiled and published by the Brain Injury Association of America through a cooperative agreement with HRSA’s MCH, Federal TBI Program.

1. What is going on in the States with respect to resource facilitation?

SURVEY QUESTION:

- i. Which of the following are responsible for planning (question #8) and delivering (question #9) resource facilitation services in your State?

One of the first questions asked was to find out if there is a distinction between who plans resource facilitation services in a State and who delivers these services. All 40 respondents answered this question, “*Who is responsible for planning resource facilitation services in the State?*” The respondents were able to check all that apply which means the average number of responses for this question is 2.6.

In planning resource facilitation services, 75 percent of the State TBI Lead Agencies have taken the primary responsibility which may indicate that States are recognizing their role in the planning of resource facilitation services.

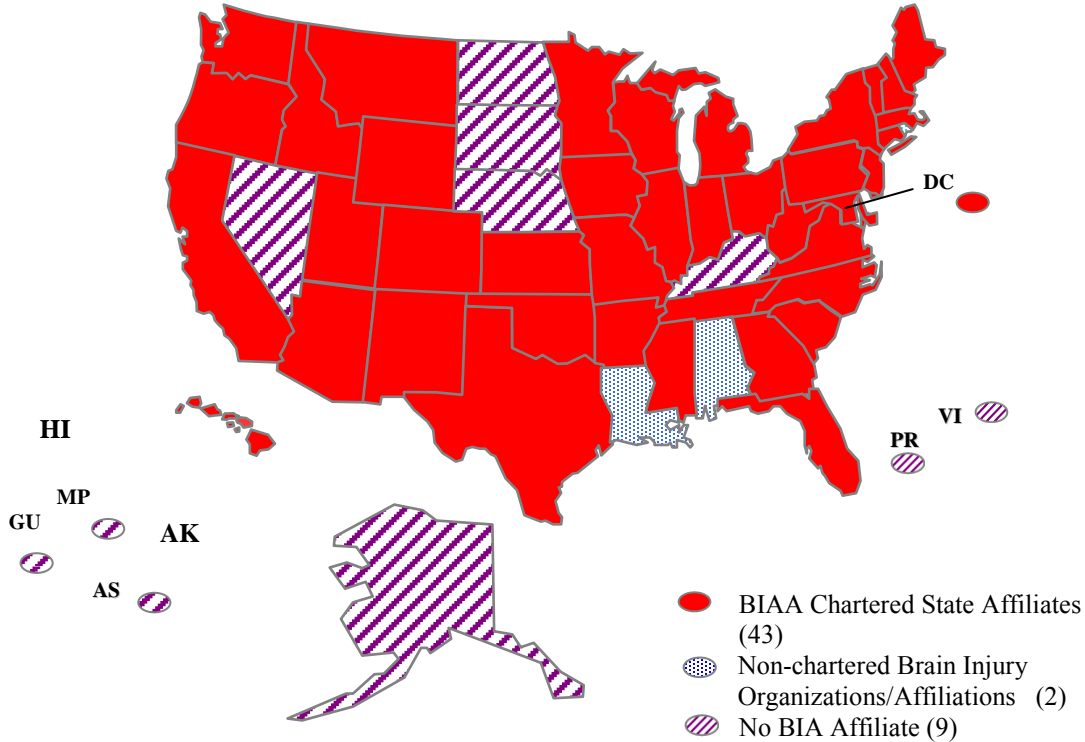

In addition, 70 percent of the BIAA chartered State affiliates and the 48 percent of the TBI statewide advisory boards/councils are identified as the other two primary entities responsible for planning resource facilitation services. (Refer to Table 1, page 34)

The ratio changes when it comes to the delivery of resource facilitation services. The highest percentage of responses is from the 28 States that indicated their BIAA’s or Brain Injury Alliances deliver resource facilitation services. This is a 70 percent response rate from the survey however, when compared to all 43 BIAA Chartered State affiliates (refer to the BIAA chartered State affiliate map below), it is a 65 percent rate. The average response rate as to who is responsible for delivering resource facilitation services is 2.72.

However, when the results for both questions, responsibility for the planning and delivery of resource facilitation services were reviewed, it is the same 28 BIA affiliates that are doing both.

Further results from the question on who is responsible for delivering resource facilitation services reveal that 55 percent (22) of responses indicate the Lead Agencies deliver these services and 48 percent (19) indicate that providers deliver these services. Additionally, there were 17 States who marked the survey selection: “*Other State agencies.*” In this category two more States added that other State agencies provide resource facilitation services for a total of 48 percent. (Refer to Table 2, page 34)

BIAA Chartered State Affiliates as of 12/08

“Other” Responses to the Survey Questions: Which of the following are responsible for planning (question #8) and delivering (question #9) resource facilitation services in your State?

Thirty three States (13 percent) selected “Other” from the survey question: “*Who is responsible for planning resource facilitation services?*” Of these responses, 20 percent (8 States) work with other State agencies, five percent (2 States) indicate the planning includes a university and in two percent (1 State) a provider is involved in the planning.

To the question, “*Who is responsible for delivering resource facilitation services?*” 12 States (30 percent) responded by indicating that eight percent (3 States) deliver services through non-profit organizations/agencies, five percent (2 States) have TBI resource facilitation delivered by other State agencies and the 2-1-1 Information & Referral system was listed in one State’s (2 percent) response.

SURVEY QUESTION:

ii. What is the point of entry/access to TBI resource facilitation services?

Service needs are often not identified until the service system has been entered. Early and correct diagnosis of a TBI is essential as a missed diagnosis or a misdiagnosis leads to absent, inappropriate or denied services and supports. Once a TBI and the ensuing service needs have been identified, it is crucial that families and individuals with traumatic injury have straightforward and readily available information. This information must identify both the point of entry into the State's existing delivery system of services and supports and be user friendly.⁸ To best meet the needs of the individual and enhance the efficacy of an agency's ability for assessment the method and tool for in-take, identification of service needs, and/or referral should be consistent or uniform across agency lines.

All 40 States responded to the question of "*What is the point of entry/access to TBI resource facilitation services?*" The responses to this question appear to be reflective of the diversity of the points of entry into States' resource facilitation service delivery systems with TBI Lead Agency as the most frequent response. Thirty States (75 percent) indicated the TBI lead agency is the point of entry or access into the State's resource facilitation services. Sixty five percent or 26 States indicated the BIAA affiliate is the entry point. The toll free helpline is the third most common method of accessing resource facilitation with 63 percent or 25 States marking this response.

There are nine States (23 percent) that either do not have a BIAA Chartered State affiliate or did not include the BIAA's information in their responses. In these States, the State is providing resource facilitation services. In five States (13 percent) the State is providing a 1-800 # helpline.

Of note, 55 percent of States (22) indicated their TBI lead agency is the point of entry/access while 75 percent (30) indicated the TBI lead agency delivers resource facilitation services. As there is an eight State difference between the Lead Agency that serves as the entry point and the agency who delivers the services, possibly, in these States the Lead Agency functions as the entry and referral source for resource facilitation services. (Refer to Bar Chart 1, page 36)

“Other” Responses to the Survey Question: What is the point of entry/access to TBI resource facilitation services?

Three States (8 percent) indicate they use the internet/web as their mechanism for accessing resource facilitation services.

This question's responses appear to be reflective of the diversity of ways in which individuals with TBI and family members are able to access the point of entry into the State's resource facilitation services. However, the complexity of accessing resource facilitation may come from the many points of entry.

⁸ This may include, but not limited to the identification of the physical location, assistance for literacy, language, and cognitive needs, cultural sensitivity, and forms that are easy to use and are not redundant.

SURVEY QUESTION:

iii. How is TBI resource facilitation funded in your State?

Thirty nine States responded to this question and one skipped it. There were 24 choices from which States could mark all that apply and/or choose to respond to the “Other” question. Twenty two (56 percent) of the States indicate State general revenue is the primary source of funding for resource facilitation. As there is no natural revenue source for TBI services and supports, it is logical that State general revenue would be the leading source of funding resource facilitation services. However, this source of funding is always at risk as the political process and climate may change within a State.

Federal funding is the second most frequently used source of funds at 46 percent (18) of the States, but it is not certain if this is from one Federal source or several. “*TBI Trust Funds*” and “*Contractor: BIAA Affiliate*” are the third most frequently marked funding sources with 39 percent or 15 States. It indicates that the BIAA funds a little more than a third of all the 39 States that responded, yet the BIAA affiliate is responsible for delivering resource facilitation services in 70 percent of the 40 States that responded to: “*Who is responsible for delivering services?*” This may indicate the BIAA affiliates are receiving funding from multiple sources.
(Refer to Bar Chart 2, page 37)

States were able to check all that applied which indicates they may have multiple funding sources for resource facilitation. The average response rate to this question was 4.87. One significant area that was not included in the question on funding sources was providers.

“Other” Responses to the Survey Question: How is TBI resource facilitation funded in your State?

Sixteen States (41 percent) provided additional information. Two States (6 percent) added their State Independent Living Councils fund resource facilitation. This funding source was not one of the 24 pre-selected survey responses. An additional two States (6 percent) indicate that resource facilitation is not a stand-alone program, but is provided as one of the services and supports of a larger program.

2. What are the numbers (demographics)?

To find out the demographics or resource facilitation numbers the survey asked questions that not only captured service and staffing numbers but went on to look at the type of data being collected, how it is collected, and purpose for collecting the data. Resource facilitation data collection ranges in States from the very basic activities of the note taking that document an encounter to very sophisticated systems that gather and analyze data.

The data collection section of the survey had the most skipped answers with an average of 6.6 per survey question. The largest amount of skipped questions was 11 in the question: “*Which of the following categories does your program collect information on the individual with brain injury?*”

SURVEY QUESTION:

i. How does your TBI resource facilitation service track data?

The first question in the data section of the survey asked how States track service data. Thirty seven responded to this question with three skipping it indicating that 93 percent of the States have a method of how they collect data on resource facilitation. States were able to check all that apply.

Sixty eight percent of the States (25) list or describe the database programs they use for collecting resource facilitation data. The most commonly used database is Microsoft Access. The second most commonly used databases were various proprietary systems (Lead Agency, hospital systems, registries, and/or NBIIC⁹ of the BIAA).

Eleven (30 percent) States indicate they track data through written notes and 41 percent (15 States) collect data by means of Word or some other computer file document. Seven States (19 percent) indicate they do not collect data.

SURVEY QUESTION:

ii. How did you determine what data to collect?

Thirty one States responded to this question and nine skipped it. States were able to check all that apply which resulted in an average response rate of 2.1. Fifty eight percent of the States (18) use their State Needs and Resources Assessment process as the primary way in which they determine what data needs to be collected. It is unclear if States are using the questions from the needs and resources assessment tool for the basis of the data to be collected or the results of the needs and resources assessments. However it was understood by the respondents, over half of the 31 States use some form of the needs and resources assessment process to determine what data to collect.

⁹ National Brain Injury Information Center

The other significant way in which States determine what data to collect is by consultation with other resource facilitation programs as 55 percent or 17 States marked this response. These responses appear to correlate with the 77 percent or 30 States that consulted with other programs as they were developing their resource facilitation services.¹⁰ These consultations may lead to a standardization of the process, provide validity, and be useful for multiple initiatives beyond resource facilitation in designing services to meet the needs of individuals with brain injury and family members. (Refer to Table 3, page 34)

“Other” Responses to the Survey Question: How did you determine what data to collect?

Sixteen States (52 percent) of the 31 who responded provided a wealth of other mechanisms or processes from which they determine what data to collect. They are:

- program requirements
- data to be collected stated in contract
- input from the field, stakeholder feedback and/or consultation
- Lead Agency policies and procedures
- input from the Statewide TBI Advisory Board/Council, resource facilitators, staff, and/or program participants

SURVEY QUESTION:

What demographic information do you collect?

As there is no standardization of the demographic data that are collected in resource facilitation programs across the country this question was an attempt to gain an understanding of the type of information that is currently being collected. Ninety one percent (30) of the States indicate the three most commonly collected data are gender, date of injury, and residency/county. Thirty three States answered this question and seven skipped it. As States could check all that apply the average responses were 6.15. (Refer to Bar Chart 3, page 38)

“Other” Responses to the Survey Question: What demographic information do you collect?

In reviewing the additional items that were added in the “Other” category, there were three States (1 percent) that collect data regarding veterans status. Other areas include co-occurring disorders, income, insurance and/or available benefits, benefits being received, and guardianship or payee status. One State collects data on housing and education and one Lead Agency is in the process of expanding the database for accessibility and tracking by their targeted case managers.

SURVEY QUESTION: Which of the following categories does your program collect information on the individual with brain injury?

Twenty nine States responded to the question and they were able to check all that apply. Functional independence in the home and community was rated the highest of the possible

¹⁰ Referenced to survey question #11, “What resources did you use to develop your State’s TBI resource facilitation services?” This is discussed under the next section, “What is each Resource Facilitation model based on?”

choices with 80 percent (23) of the States selecting this response. Seventy two percent or 21 States selected access to information as the second most frequent response and 69 percent (20) States responded that employment is the third most frequently gathered information.

(Refer to Bar Chart 4, page 38)

This question had the largest amount of skipped questions with 11 States or 38 percent skipping it. There may be two reasons for this: the question and responses did not work well together or this information may reside with the BIAA affiliate. Consequently, it wasn't clear how much of the BIAA affiliate's information was included.

“Other” Responses to the Survey Question: Which of the following categories does your program collect information on the individual with brain injury?

The responses provided from the 12 who added comments in the “Other” category were as varied as the number of responses. One State indicates it collects information on clubs and affiliations while two other States collect a fuller range of information such as changes in living situation, income, entitlements, transition and/or diversion from institutions, assistive technology obtained, goals met/not met and reasons why.

SURVEY QUESTION:

iii. Do you collect caregiver/family data?

All caregivers were grouped together in this question as it did not distinguish between family caregivers and agency or professional caregivers. Thirty six States responded to this question and four skipped it. Of these, 20 States (56 percent) marked they do not collect caregiver/family data.

Fourteen States indicate they do collect information in the following domains. Those who answered “Yes” were able to check all that apply and their average responses were 7.75.

- 79 percent (11 States).....Resources utilized
- 57 percent (8 States).....Adjustment/coping skills
- 50 percent (7 States).....Ability to maintain pre-injury employment or education (when applicable)
- 36 percent (5 States).....Satisfaction with life

“Other” Responses to the Survey Question: Do you collect caregiver/family category?

Sixty four percent (9) of the 14 States, who responded “Yes” provided responses in the “Other” category. The following bullets illustrate their variety of responses.

- Financial status if “cost services” are provided to the family
- Input provided in the assessment and development of their family member’s goals
- Availability of needed resources and supports along with back up plans
- Needs assessment
- Crisis
- Age

SURVEY QUESTION:

iv. Do you collect follow-up data?

In this question, States were asked indicate whether they collect follow-up data with the individual. For those who do, they were able to check all the responses that applied. Thirty five States responded to the question and five skipped it. Of the 35 who responded there were 12 States (34 percent) who answered “No.” Of the 19 States (54 percent) who responded “Yes” to this question, fifty eight percent¹¹ (11 States) collect this data annually. Six States (32 percent) collect it monthly and four States (21 percent) collect data twice a year. One State collects data on a weekly basis.

“Other” Responses to the Survey Question: Do you collect follow-up data?

There were 12 States that provided additional information in the “Other” category. They explained in more detail the circumstances under which they continue to collect data, not the frequency. Program requirements and the requests for continued services were the other two areas that help drive the collecting of follow-up data.

In this “*Follow-up data*” and “*Family/caregiver*” survey questions, the numbers of skipped and “No” responses appear to be significant as it may indicate more the need for layers and the funding of resource facilitation in order to capture this data than is currently available. The other issue, it is uncertain if there was some confusion with the question or if the respondent did not have access to the information?

SURVEY QUESTION:

v. Please indicate the number of people who received resource facilitation services in calendar year 2007.

Thirty four States responded to this question and six skipped it. The greatest number of individuals served in one State was 7000 and the least amount served was one State who is serving one person¹². The respondent who listed 7000 reported the numbers of all the State agencies that provide resource facilitation services for individuals with brain injury. There were 3 States that marked zero therefore; the total average is based on 31.

	Number of States	Total Served	Response Average
Number of People who Received Resource Facilitation Services in calendar year 2007	31	40,878	1318.6
Numbers served from 1-99	4	180	45
Numbers served from 100-499	7	2176	311
Numbers served from 500 - 999	7	4404	629
Numbers served over 1000	13	34118	2624

¹¹ 19 “Yes” divided by 11 States = 58 percent

¹² When the survey was conducted, this State had just started enrolling individuals for resource facilitation services.

Forty thousand plus appears to be an impressive number of people receiving resource facilitation. The total number of people served changes significantly when the State reporting 7000 served in 2007 is removed. The remaining 33,878 individuals, an average of 1129.2 per State who received resource facilitation services may be under-reported as it is uncertain that the numbers from the BIAA affiliates and providers were available in this data.

SURVEY QUESTION:

vi. Please indicate the number of staff in your State who provide TBI resource facilitation.

To the overall question, 35 States responded to this question and five skipped it. However, when the results are looked at individually in each of the four categories, the results are as follows: Thirty States responded they have full time paid staff, 13 have paid part time staff, eight have part time volunteer staff, and two have full time volunteer staff. Of these, the highest number of full time paid staff in one State was 175 and the lowest number were six States who each had one full time paid staff. The following charts show the various levels of resource facilitation staffing.

	Number of States	Total Staff	Response Average
Number of Paid Full Time Staff	30	552	18.4
1-5	14	28	2
6-10	7	57	8
11-20	3	46	15
21-50	4	146	37
Over 50	2	275	138

	Number of States	Total Staff	Response Average
Number of Paid Part Time Staff	13	63	4.8
1-5	11	27	2.5
11-20	1	11	11
21-50	1	25	25

	Number of States	Total Staff	Response Average
Number of Volunteer Part Time Staff	8	358	22.4
1-5	6	8	1.3
Over 50	2	350	175

	Number of States	Total Staff	Response Average
Number of Volunteer Full Time Staff	2	2	1.00
1-5	2	2	1.00

Thirty States responded there is full time paid staff providing resource facilitation. When filtered with the results from the survey question, “*Who is responsible for delivering resource facilitation services?*” there are 17 Lead Agencies with a total of 464 staff and 22 BIAA affiliates with 294 staff who indicated there is a least one paid full time staff. There are 12 States that have a total of 725 paid and volunteer staff providing resource facilitation services.

As States were able to check all that apply, there are 11 States that have full time staffing for resource facilitation along with additional part time paid and/or volunteer staff.

3. What models were used to develop resource facilitation?

SURVEY QUESTION:

i. What resources did you use to develop your State's TBI resource facilitation services?

The term resource facilitation has been growing in usage in the States since 2000 when a meeting of stakeholders, individuals with TBI and family members met in Kansas City to work on developing a consensus of what resource facilitation is. It was funded through a cooperative agreement with the Health Resources and Services Administration's Maternal and Child Health Bureau's Federal TBI Program and the Brain Injury Association of America. From this meeting, the following publication was generated: *Resource Facilitation: A Consensus of Principles and Best Practices to Guide Program Development and Operation in Brain Injury*.

This document provided a systems or macro perspective to resource facilitation and for 15 States or 39 percent of the 40 States this was one of the resources used in developing their resource facilitation services. As the *Resource Facilitation: A Consensus...in Brain Injury* was only one resource, it warranted a closer look to find out what other resources are being used to develop a State's resource facilitation services.

Consultation with other programs is done by 75 percent (30 States) which may imply that States are looking to other programs in their own State. By doing so, it may lead to uniformity and continuity of services across State systems as well as a cost saving method as States may not be reinventing the wheel.

The State Needs and Resources Assessment is used by 72 percent (28 States). Consultation with other States was done by 62 percent or 24 States.

“Other” Responses to the Survey Question: What resources did you use to develop your State's TBI resource facilitation services?

There were three States (8 percent) whose only response to this question was in the “Other” category. Ten States (40 percent) marked one or more of the four choices in the question. The following is a representative sampling of the “Other” responses:

1. Four States (10 percent) indicate experiences in working with individuals and family members.
2. Three States (8 percent) indicate there was a definition or program in place.
3. Five States (13 percent) consult with providers or advisory boards/councils.

4. What types of resource facilitation services are being provided across States?

SURVEY QUESTION:

- i. Which of the following services are provided by your state's TBI resource facilitation for individuals with brain injury and family members?**

Resource facilitation covers a wide range of services which were reflected in this survey question. There were 27 possible areas of services provided through resource facilitation from which States could choose. All 40 States responded to this question and they were able to select all that applied to their State.

The survey questions were set up to correlate with the first six functions listed in *Resource Facilitation: A Consensus of Principles and Best Practices to Guide Program Development and Operation in Brain Injury* (aka Resource Facilitation Guide) as the core functions of a comprehensive resource facilitation service delivery system.

They are:

- Assessment
- Planning
- Identification
- Negotiation
- Monitoring
- Reassessment

The States' survey results are considerably different from those first six listed in the Resource Facilitation Guide. Eighty eight percent of the States (35) marked they provide identification of resources followed by 34 States (85 percent) responding they provide information & referral support.

To clarify, information and referral is part of the assessment process and is generally considered to be brief by gathering enough information to fill the immediate need either by providing information and resources or by making a referral to a point of entry to a service delivery system or a provider. In the information and referral phase, frequently printed, audio or internet resources may be provided to the individual or family members who are seeking information.

Generally, identification of resources occurs once the resource facilitation plan has been developed because it involves locating the information, services and supports as outlined in the agreed upon resource facilitation plan. These distinctions were not defined in the survey. This lack of clarity in the survey question responses may have caused some confusion for responders as the results of the survey show there is only a one State difference in the number of States indicating they provide these services. It is speculated the responders considered these two survey selections to be similar or the same.

The third most commonly selected response is a tie with distribution of Educational Materials and Public Awareness. Eighty percent or 32 States see these functions as part of their resource

facilitation services. “*Support Groups*” (75 percent/30 States) and “*Outreach to Targeted Groups*” (73 percent/29 States) are the next two in order of frequency of services provided. “*Assessment*” received 73 percent of the responses from 29 States. With the survey results distinctly different from the basic resource facilitation services outlined in *Resource Facilitation: A Consensus of Principles and Best Practices to Guide Program Development and Operation in Brain Injury* the average depth of the States’ resource facilitation services appear to be functioning at a basic level or layer. (Refer to Bar Chart 5, page 39)

5. What information would allow for comparison, contrast and the demonstration of diversity among resource facilitation programs?

SURVEY QUESTION:

- i. Resource facilitation for individuals with brain injury and family members is known by many names. What is it called in your State?**

One of the primary areas for comparing and contrasting the diversity among resource facilitation programs/services stems from what resource facilitation is called in each State. This survey attempted to find out the many names by which resource facilitation is known and in doing so it was difficult to distinguish between what the service is called and the function that is provided. All 40 States responded to this question and respondents could check all that apply which led to a response average of 2.9 indicating there are still several names by which these services are known within a State.

The name, resource facilitation, is selected by 28 percent of the States (11) which is just over a quarter of the States. Almost half, 48 percent or 19 States indicate that resource facilitation is called service coordination and in 43 percent or 17 States, the term case management is used.

Information and referral received the largest amount of responses at 73 percent or 29 States. Even though information and referral is not a name but a function it correlated to the responses to the survey question: “Which of the following services are provided by your State’s TBI Resource Facilitation for Individuals with brain injury and family members?” In both of these survey questions, information and referral is selected the most frequently.

“Service Coordination” is the second most frequently selected response with 48 percent or 19 States indicating that resource facilitation is known by this name in their respective States with “Case Management” ranking third at 43 percent or 17 States.

With just under half of the 40 respondents stating their resource facilitation services are also known as case management and service coordination, this may indicate that resource facilitation may be a part of more complex and layered services that are provided through TBI waivers or other State service delivery systems in which individuals with brain injury receive services. This survey was not designed to provide that specific information.

(Refer to Bar Chart 6, page 40)

“Other” Responses to the Survey Question: Resource facilitation for individuals with brain injury and family members is known by many names. What is it called in your State?

There are eight States (20 percent) who provided additional information in the “Other” category. This is mix of the BIAA Chartered State affiliates and State agencies explaining in more detail what services are provided rather than what resource facilitation is called in their States. One State said it is sometimes referred to as “crisis case management” and another called it “peer advocacy.”

The term resource facilitation may not be a more recognizable term since the publication of the *Resource Facilitation: A Consensus of Principles and Best Practices to Guide Program Development and Operation in Brain Injury* in 2000, but the survey results tend to indicate these services are being provided regardless of what it is called across States and within States.

SURVEY QUESTION:

ii. How does your TBI resource facilitation service implement person and family directed services?

Person and Family Directed Services and Supports is a guiding principle of the Federal TBI Program. To help give definition and technical assistance guidance for incorporating these principles into State systems of services and supports, the Person and Family Directed Services Focus Area Work Group was established.

The work group developed their mission¹³, philosophy, and core values, but in doing so, they wanted to know how these might be implemented in service delivery systems across the country. Resource facilitation seemed to be good place to start as it so directly involves the individual with TBI and family members. To get a sense of how States are implementing person and family directed services in their resource facilitation services four possible responses were incorporated into the survey. However, they only skimmed the surface towards finding out the depth of a State's involvement in person and family directed services and supports. There were 37 respondents to these questions and three States skipped them.

One of the first things in providing person and family directed services is to incorporate person centered planning. To accomplish this, the individual's needs are assessed and goals are developed and all parties come to agreement in developing and carrying out the resource facilitation plan with the individual. The survey asked if individuals with brain injury and/or family members identify goals and put them in a written plan with their brain injury resource facilitator. Fifty Seven percent, a little more than half of the States (21) marked that this is done in their resource facilitation services.

When these responses are filtered with the last question of the survey, "*How do you determine the individual has reached the desired outcome? - Attainment of agreed upon goals,*" there are 14 States (66 percent) that do both. By comparing these responses it tends to indicate there is a deeper or more complex level or layer of services that are occurring.

The other most frequently selected response was: "*There is a stakeholder's advisory group which reviews activities, surveys, etc.*" Again, 57 percent (21 States) indicate this is how they provide person and family directed services and supports.

The third most frequently selected response, "*Individuals with brain injury and/or family members participate in the evaluation of the brain injury resource facilitation program*" with 20 States or 54 percent indicating this type participation in the evaluation process.

¹³ The Federal TBI Program recognizes that individuals with Traumatic Brain Injury (TBI) should have the same civil rights, options, and control over choices in their lives as do all other citizens and therefore, promotes the incorporation of Person and Family Directed Core Values in State systems of services and supports for individuals with TBI and their families.

Thirty five percent of the States (13) have individuals with brain injury and family members periodically complete a survey of individual services provided. These activities could have bearing on improving person and family directed services as they are components of an evaluation process, but these responses are not to be viewed through an evaluation lense.

“Other” Responses to the Survey Question: How does your TBI resource facilitation service implement person and family directed services?

There were 11 States (30 percent), who responded in the “Other” category. Of these, five States or 13 percent, “Other” was their sole response. The remaining six States (16 percent) provided additive information but did not clarify how the State is incorporating person centered planning and person and family directed services. However, one State indicates they develop a plan with the individual and family members.

SURVEY QUESTION:

iii. What is the process for the initial assessment?

Thirty nine States responded to this question and one skipped it. As the survey was looking for the mechanism(s) used when individuals with TBI and family members are initially assessed for resource facilitation services the respondents were encouraged to check all that applied which is an average response rate of 2.5. It appears that there may be several mechanisms in a State by which an initial assessment may be done.

Eight five percent of the States (33) indicate the telephone is the method that is used for the initial assessment or in-take. Home visits are the second most commonly used method at 56 percent (22 States). Forty six percent (18 States) conduct the initial assessment in a hospital or rehabilitation facility setting. (Refer to Table 4, page 34)

“Other” Responses to the Survey Question: What is the process for the initial assessment?

There were ten States (26 percent) that provided additional information in the “Other” category. They indicate the initial assessment varies from agency to agency. They addressed the process for initial assessment, but not the mechanisms used by the in-take person.

There may have been more clarification in the survey instrument if the word “in-take” was used in place of “initial assessment” as assessment implies the process of determining eligibility.

SURVEY QUESTION:

iv. How do you collect data?

Thirty three States answered this question and 7 skipped it. Those who responded were able to check all that apply which indicates the average number of responses of 2.18. The telephone is the most frequently used method for collecting data as stated by 79 percent (26) of the States. Fifty five percent of the States (18) use a mail survey to collect their data and 49 percent (16 States) use a home visit. (Refer to Table 5, page 35)

“Other” Responses to the Survey Question: How do you collect data?

Twelve States (37 percent) responded in the “Other” category by adding email, faxes, and/or job site visits as additional ways in which data is collected. There are multiple ways in which data are collected across the States. Of note, the numbers of States who conduct their initial assessment by the telephone (33 States) is not the same as those (26 States) who collect data by use of the phone. This difference may raise questions about the depth of services being provided or the resources available to complete the data collection process as these two activities appear to be directly related.

6. How is resource facilitation carried out?

SURVEY QUESTION:

i. With which agencies/organizations has your TBI resource facilitation program established collaborations?

Building collaborations is the backbone of successful resource facilitation as the following quote¹⁴ sets forth, “To ensure successful TBI systems improvement strategies, identifying partners for collaborative ventures is critical. Partnering and working together allows agencies and organizations to combine talents and resources to accomplish goals that would be difficult to achieve alone.”

Thirty seven (37) States responded to this survey question, three States skipped this question. Respondents were asked to list the collaborations they have established with agencies and organizations in the provision of resource facilitation program. As States were only asked to list their collaborations, there is no detail about the nature or extent of the collaborative relationships. The number of collaborations listed may be reflective of the number of people (one or more contributors) responding to the survey questions.

In tallying up the numbers of collaborations the greatest aggregated number appears to be with a variety of sister State agencies. There are eight States that list State Agency with no specificity given. However many States specifically listed the following sister agencies as collaborators:

- Mental Health and Substance Abuse (15)
- Vocational Rehabilitation (15)
- Human and Social Services (7)
- Aging and Disability Services (5)
- Corrections and/or Law Enforcement (5)
- Education (5)
- Health (5)
- Medicaid (5)
- Developmental Disabilities (3)
- Family Services (3)
- Protective Services – APS/CPS (3)
- Public Health (3)

Community based collaborations are a key to successful delivery of resource facilitation which may be one of the reasons one State wrote, our “...network currently has 110 partners that collaborate with the program.” The following list is a sampling of the agencies and organizations with whom collaborations have been established.

- BIAA Chartered State Affiliates (15)
- Protection and Advocacy Systems (12)

¹⁴ Federal TBI Technical Assistance Center tool, Collaboration and Coalition Building Grid

¹⁵ Number of States

- Independent Living Centers and/or Independent Living Councils (12)
- Community organizations/agencies (10)
- Public and private providers (10)
- Veterans Administration, National Guard, and Veterans Service Organizations (10)
- Trauma centers and rehabilitation hospitals (8)
- Coalitions and collaboratives (7)
- Disability organizations (7)
- Disability planning councils (7)
- Medicaid (5)
- County health and housing agencies (5)
- School districts (4)
- Statewide Advisory Board/Councils (4)
- 2-1-1 System (2)
- National Institute of Disability Rehabilitation Research (NIDRR) TBI model systems (1)

The ability to collaborate is best said in the words of one of the respondents, there are “too many to list.”

SURVEY QUESTION:

ii. With which agencies/organizations has your TBI resource facilitation program established some type of contractual relationship?

Establishing a contractual relationship to provide resource facilitation services and supports brings a formality to a relationship and indicates a level of capacity and accountability in the delivery of resource facilitation services. To get a sense of contractual relationships, States were asked only to list them. They were not asked to describe the contractual relationship or services to be provided. As the question was worded there may have been some confusion as the TBI resource facilitation program may have been considered the contracting entity when in reality it may be the contractor. As the survey instrument allowed only one person to enter the data resulting in over 70 percent of the responses from the Lead Agency, it is presumed the contractual relationship listed presents the State as the contracting agency.

Thirty four States (85 percent) responded to the question with six skipping it and an additional six States wrote in they do not have any contractual relationships. This is a total of 12 States (30 percent of 40) who either state they do not have or did not respond to having contractual relationships in place.

As noted in the preceding “*Collaboration*” section, the majority or aggregate of collaborations are with sister State agencies but there is no way of knowing if the collaborations have contractual arrangements as well. In reviewing the responses to this survey question, private and/or community based providers are listed most frequently as 61 percent¹⁶ of the States (17) have contracts. Fifty percent of the 28 States (14) have contracts with their BIAA affiliates. From the survey results we are able to group the following:

¹⁶ Of the 28 who responded to this question.

- Twenty one percent of 28 or six responses have only one contract.
- Eighty two percent of 28 or 23 responses have contracts with more than one entity.

Of note, one State has a contract with a neuropsychologist to provide free screenings and evaluations.

SURVEY QUESTION:

iii. To fund TBI resource facilitation do you use:

Thirty five States responded to this question and five skipped it. States were able to check all that apply which made the results less clear. Forty percent of the States (14) indicate they use sole source funding or funding from one source. Of these 14, there are ten States (29 percent) who marked sole source funding and one other type of funding which explains the average responses of 1.3.

The other choices that States had were:

- Blended or pooled funding – funding from more than one sources which is pooled to support staff and services with 14 States or (40 percent) responding.
- Braided funding: funding from more than one source which pays for different components of services with ten States or (29 percent) responding.
- Leveraged funding: using TBI specific funding to obtain commitment from other sources toward TBI specific resources with eight States or 23 percent responding.

It is unclear whether the provision of resource facilitation requires this level of funding complexity or if States are responding to their respective service delivery systems in which TBI resource facilitation may be incorporated. (Refer to Table 6, page 35)

SURVEY QUESTION:

iv. Does your TBI Resource Facilitation have eligibility requirements?

Thirty nine (39) States responded and one skipped this question. From the results of the survey, eligibility requirements for resource facilitation services appear to range from stringent eligibility criteria to those that are inclusive and broad based. Respondents were able to mark both “Yes” and “Check all that Apply” to one or more of the following five selections for an average of 1.56 responses.

- All Individuals with TBI are Eligible.
- Proof of residency.
- Financial Requirements.
- Functional Status Level.
- Severity of TBI.

As the choices for this survey question were poorly worded the anticipated information was not as clear as the crafters of the survey had hoped. States could select “No” as a response and 15 States or 39 percent did.

There were an additional 39 percent (15 States) that responded to both “*Yes, Check all that Apply*” and “*All individuals with TBI are eligible.*” Upon closer examination of these two questions, there are a total of 20 (51 percent) unduplicated States that responded to both of these questions.

Of these categories, “*Proof of Residency*” is the third most frequently selected response to which 36 percent or 14 States responded. (Refer to Table 7, page 35)

“Other” Responses to the Survey Question: Does your TBI Resource Facilitation have eligibility requirements?

The category that received the highest number of responses is the “Other” section with 20 States (52 percent) many of which require multiple eligibility criteria for their State’s services. Some of the write-in responses provided that are different from the pre-selected choices are:

- Must be less than 18 in one State or have sustained the brain injury prior to turning 22 years of age in other States.
- Demonstrates the ability to progress.
- Voluntary, person’s choice to participate.
- Is not receiving duplicate services through another State agency.
- Must meet the definition of head injury in the State Code.
- Meets the State’s brain injury program requirements.
- Has proof or medical diagnosis of TBI.
- Meets the selection criteria for a resource facilitation research study.
- Meets the BIA’s affiliates eligibility criteria which may are not be the same as the State plan services.

Respondents mention there are other services available in their States which may not have these restrictive eligibility criteria, but the services may not as intense. They indicate the services are generally information and referral, support services and some resource facilitation. It is unclear whether the services of the BIAA affiliates are included in these responses because their eligibility requirements for resource facilitation are frequently different from those of the State.

SURVEY QUESTION:

v. What is the method for delivering resource facilitation services?

In addition to discovering eligibility criteria for resource facilitation services, respondents were asked how these services are delivered. Thirty nine States responded to this question and one skipped it with the average responses to these questions of 2.13.

Sixty four percent of the States (25) marked they deliver resource facilitation services as a result of a one-on-one process. It is unclear if those who marked this response view one-on-one as face-to-face. For purposes of this survey, it is intended to mean face-to-face. This interpretation is supported by comparing it to the responses from the survey question, “*What is the process for the initial assessment?*” The highest percentages show that the initial assessments transpire in the individual’s home as opposed to office visits or in the hospital or rehabilitation facility. This

may indicate there is more than a basic level of services as 64 percent of the 39 respondents deliver resource facilitation one-on-one (face-to-face).

Fifty six percent of the States (22) indicate they deliver resource facilitation services from multiple locations around the State. This may be an indicator of the size of the resource facilitation program or a preferred way to deliver services, but the survey did not ask for this information. Fifty four percent (21) of the States deliver resource facilitation services by phone from a central location in the State which again may be more of a factor of the size of the program

“Other” Responses to the Survey Question: What is the method for delivering resource facilitation services?

Thirty one percent (12) of the States offered information in the “Other” category. Two States provided the following detail on how they deliver resource facilitation services: one indicated the resource facilitators maintain monthly contact with at least one face-to-face contact during the quarter and the other stated that initial inquiries are handled by phone with follow-up materials being sent via mail or email. Once the individual begins receiving resource facilitation the services are one-on-one.

One concern raised by a State in the “Other” responses is regarding the efficacy of these services when multiple agencies/organizations are providing resource facilitation.

7. How is success measured?

SURVEY QUESTION:

i. Does your TBI Resource Facilitation have risk management policies and procedures?

States were asked if they have risk management policy and procedures in place. This is generally understood to mean that the resource facilitation services have policies and procedures in place to reduce liability exposure. Thirty seven States responded to this question and three skipped it. Sixty two percent of the States (23) indicate they have them in place and 38 percent or 14 States marked “No.” As over half indicated they have risk management policies in place this indicates resource facilitation is more formalized as systems are in place to help build towards the success of the program.

SURVEY QUESTION:

ii. How do you determine the individual has reached the desired outcome?

Attainment of agreed upon goals is the most frequently selected response at 55 percent or 18 States. This question had 33 responses with seven skipping it. As States were able to check all that applied the average response rate was 1.85.

The second most frequently selected response is the use of a “*Satisfaction survey*.” Fifty two percent of the States (17) marked this choice. When comparing the two highest marked areas that States use to determine if the individual has reached the desired outcome with survey question seven, “*How does your TBI resource facilitation service implement person and family directed services?*” 21 States or 57 percent of the 37 indicate they work on developing written goals. When comparing these two responses over half of the States focus on attainment of agreed upon goals and customer satisfaction. Both methods are indicators of whether a service was beneficial and the desired outcome was reached.

The third most frequently selected response was the “*One-on-one interview*.” It was selected by 30 percent or 10 States. (Refer to Table 8, page 35)

“Other” Responses to the Survey Question: How do you determine the individual has reached the desired outcome?

There are 12 States that responded in the “Other” category but there are no clear practices or methods described.

How are States strategically planning for sustainability of resource facilitation services?

States have been encouraged to maximize their resources to achieve program sustainability. These range from applying for all available State and Federal funding streams to facilitating opportunities for innovation related to cost sharing, coordinating services and supports, and working creatively with funding sources to formally consider and incorporate cost effective suggestions from individuals with TBI, family members and providers. One of the basic components to achieve sustainability and/or increase the level of services is to develop a strategic plan.

SURVEY QUESTION:

iii. Has your agency or partnering agency identified a strategic plan for:

There were 32 States that responded to this question and eight skipped it. As States were able to check all that applied the average response rate was 1.3. The area with the greatest amount of responses is strategic planning, *“To Increase the Levels of Services,”* with 72 percent or 23 States selecting this response. The number of responses to this question was somewhat surprising as pre-survey thinking speculated the majority of responses would be, *“To Continue Funding”* but it was the second most frequently selected response with 66 percent or 21 States choosing this response. One explanation may be there is some level of presumption that funding for resource facilitation is available and increasing services then takes precedence.

The third most frequently selected response was *“To Increase Accessibility Statewide”* with 63 percent or 20 States responding. The last selection available, *“To Integrate TBI Resource Facilitation into the TBI State Action Plan”* with 44 percent of the States (14) selecting this response. Out of all these responses there are a total of six unduplicated States (19 percent) whose strategic planning is limited to one of the four survey choices.

“Other” Responses to the Survey Question: Has your agency or partnering agency identified a strategic plan for:

Seven States (22 percent) offered several other areas in which they indicate identifying a strategic plan. They cite long term supports, rehabilitative services, prevention and public education, crisis intervention and response, and Lead Agency budget requests.

SURVEY QUESTION:

iv. What strategies are used to elicit funding from policymakers?

Thirty five States responded to this question and five skipped it. States were able to check all that apply which gave an average response rate of 2.91. Sixty nine percent of the States (24) have personal meetings with their legislators and use data to demonstrate the need for resource facilitation services.

Of these 24 there are 17 States (49 percent of the total respondents of 35) who use both of these methods to elicit funding. There may be something to be said for having hard data and personal

contacts however, the survey did not ask for the type of data or the results of these strategies. In reviewing the survey responses of the 17 States who use both strategies they all have a TBI advocacy presence in their respective States.

The third most frequently selected response of awareness and fundraising activities was selected by 66 percent or 23 States. (Refer to Table 9, page 36)

“Other” Responses to the Survey Question: What strategies are used to elicit funding from policymakers?

Ten States (29 percent) responded in the “Other” category with some additional strategies to elicit funding which are reflected in the following bullet points:

- Funding requests are addressed in the State budget process.
- Direct legislative advocacy by volunteers or paid lobbyist.
- An annual report is submitted by the TBI Statewide Advisory Board.
- A State senator sits on a TBI Statewide Advisory Board.

8. Observations

Exceptional Survey Response

The number of States responding to the survey was exceptionally high for a voluntary survey as 48 out of a potential 57 States and Territories responded. From this response it was learned that 40 States in 2008 are providing some form of resource facilitation for individuals with TBI and family members which is a growth rate of 42 percent since 2000.

Increase of Resource Facilitation Services

The name by which resource facilitation is called varies greatly from State to State and within a given State. The survey results revealed more about the provision and functions of resource facilitation than what it is called. Resource facilitation may not be a more recognizable name since the publication of the 2000 *Resource Facilitation: A Consensus of Principles and Best Practices to Guide Program Development and Operation in Brain Injury* but the provision of these services is being recognized as a valuable service occurring in 70 percent of the States.

Resource Facilitation Service Delivery Primarily Provided by the Chartered State Brain Injury Association Affiliates

The survey indicated a mix of Lead Agencies, sister State agencies and providers who provide a significant amount of resource facilitation. However, the organizations which delivers 70 percent of resource facilitation services are the BIAA Chartered State Affiliates. This may stem from one of the BIAA's primary roles to provide information and resources. The downside, the survey questions did not clearly link the types of services provided with a specific agency or organization. What was discovered: there are potentially several entities in a State that provide resource facilitation for individuals with TBI and family members. The trick is finding access to them.

State General Revenue is the Primary Resource Facilitation Funding Source

In most States there is no natural revenue source for TBI services and supports since TBI does not clearly fall into a specific State agency such as mental health, aging, long term care, education, or services for people with disabling conditions. As such, individuals with TBI are receiving services within a variety of agencies and organizations but there may not be funding in the agencies' budgets to support resource facilitation. As a result, agencies and organizations look to State general revenue to fund TBI resource facilitation as was indicated by a little more than half of the States.

General revenue may be a funding stream used by over half of the 40 States, but there are risks associated in relying on it. When State general revenue is the primary source of funding it puts States in a position of continually having to prove that TBI resource facilitation is a worthwhile service. The funding may only be for the current year which makes it relatively short term. Additionally, general revenue spending is always at risk as political climates change within

States on a regular basis which may have an effect on the ability to secure State general revenue dollars.

No Required or Uniform Data Sets for Resource Facilitation Services

The survey instrument's questions were grouped into three sections: Administrative and Operational, Funding/Sustainability/Strategic Planning and Data Collection. Of these three sections, the Data section had the most skipped questions which may indicate States self-select the type and amount of resource facilitation data that are collected. There is no standardized or required data to be collected. Most States marked they collect data on gender, date of injury and residency/country, yet 69 percent of the States indicated they use their data as one of the strategies to elicit funding from policymakers. As over half of the 40 States appear to be having a measure of success in receiving general revenue funding one might conclude that more thorough data collection would improve the chances of obtaining sustained TBI resource facilitation.

Many Thousand Thanks to:

All the States who took the time to provide their State's snapshot of resource facilitation services for individuals with TBI and family members and to the Person and Family Directed Services work group of HRSA's Federal TBI Program's TBI Technical Assistance Center who have given so freely of their time and commitment in developing the survey instrument and in analyzing the results.

III. REFERENCE SECTION OF SURVEY TABLES AND CHARTS

REFERENCE

Table 1: Which of the following are responsible for planning TBI Resource Facilitation in your State? Could check all that apply.

Responsible for Planning Resource Facilitation in the States (Could check all that applied)	Number	Percent of 40 respondents
TBI Lead Agency	30	75%
BIAA Chartered State Affiliate	28	70%
TBI Statewide Advisory Board/Council	19	48%
State Protection & Advocacy System	13	33%
Trust Fund Board	7	18%
Volunteers	6	15%
Number of Responses	103	2.76

Table 2: Which of the following are responsible for delivering TBI Resource Facilitation Services? Could check all that apply.

Responsible for Delivering Resource Facilitation in the States	Number	Percent of 40 respondents
BIAA Chartered State Affiliate	28	70%
TBI Lead Agency	22	55%
Providers	19	48%
Other State Agency (ies)	17	43%
State Protection & Advocacy System	13	33%
Volunteers	10	25%
Number of Responses	109	2.72

Table 3: How did you determine what data was to be collected?

Could check all that apply..

Determining what Data is to be Collected	Number	Percent of 31 respondents
Needs and Resources Assessment	18	58%
By Consulting Other Resource Facilitation Programs	17	55%
By Consulting Written Materials on Resource Facilitation	16	52%
By Consulting Written Materials on Resource Facilitation	14	46%
Number of Responses	65	2.1

Table 4: What is the process for the initial assessment? Could check all that apply.

Process for Initial Assessment	Number	Percent of 40 respondents
Telephone	33	85%
Home Visit	22	56%
Office Visit	19	49%
Hospital or Rehabilitation Facility	18	46%
Mail Survey	4	10%
Number of Responses	96	2.4

Table 5: How do you collect data?

Could check all that apply.

How Data is Collected?	Number	Percent of 33 respondents
Telephone	26	79%
Mail Survey	18	55%
Home Visit	16	49%
Office Visit	12	36%
Number of Responses	72	2.18

Table 6: To fund TBI Resource Facilitation do you use: Could check all that apply.

TBI Resource Facilitation Funding Methods	Number	Percent of 35 respondents
Blended or pooled funding – funded from more than one sources which is pooled to support staff and services	14	40%
Sole source funding – funding from one source	14	40%
Braided funding – funding from more than one source which pays for different components of services	10	29%
Leveraged funding – using TBI specific funding to obtain commitment from other sources toward TBI specific resources	8	23%
Number of Responses	46	1.31

Table 7: Does your TBI Resource Facilitation have eligibility requirements?

Could check all that apply..

Resource Facilitation Eligibility Requirements	Number	Percent of 39 respondents
Yes, Check all the Apply	15	39%
All Individuals with TBI are Eligible	15	39%
Proof of Residency	14	36%
Financial Requirements	9	23%
Functional Status Level	5	13%
Severity of TBI	3	8%
Number of Responses	61	1.56

Table 8: How do you determine the individual has reached the desired outcome?

Could check all that apply..

Determining the Individual Has Reached the Desired Outcome	Number	Percent of 33 respondents
Attainment of agreed upon goals	18	55%
Satisfaction survey	17	52%
One-on-one interview	10	30%
Exit interview	6	18%
Family member has been able to maintain education/employment	5	15%
Individual with brain injury has returned to employment	5	15%

Table 9: What strategies are used to elicit funding from policymakers?

Could check all that apply..

Strategies to Elicit Funding from Policymakers	Number	Percent of 35 respondents
Personal Meetings with Legislators	24	69%
Utilization of Data to Demonstrate the Need	24	69%
Awareness and Fundraising Activities	23	66%
Legislative Committee	16	46%
Review of State Action Plan	15	43%
Number of Responses	102	2.91

Anchorage, AK 99508

Resource Facilitation for individuals with brain injury and family members is known by many names. What is it called in your State?

Information & Referral (I&R)

Which services are provided by your State's TBI Resource Facilitation for individuals with brain injury and family members?

Identification of Resources	Outreach to Target Populations
Mentoring/Peer Support	Creation of Educational Materials
Support Groups	Distribution of Educational Materials
Case Management	Resource Library
Training	Electronic Media Outreach (TV/Radio)
Public Awareness	Crisis Management

How does your TBI Resource Facilitation Service implement person and family directed services?

There is a stakeholders' advisory group which reviews activities, surveys, etc.

Which agencies/groups are responsible for planning TBI Resource Facilitation in your State?

State TBI Advisory Board/Council

Which agencies/groups are responsible for delivering TBI Resource Facilitation Services?

TBI Advisory Board

What is the point of entry/access to TBI Resource Facilitation Services?

Toll free helpline	Other State Agency
2-1-1 system	Discharge process from hospital or rehabilitation facility
TBI Lead Agency	

What is the method for delivering resource facilitation services?

Telephone from one statewide location

Please indicate the number of people who received resource facilitation services in calendar year 2007.

Number of individuals served – 215

Please indicate the number of staff in your State who provide TBI Resource Facilitation for each that apply.

Paid staff full time - 1

How is TBI Resource Facilitation funded in your State?

Alaska Mental Health Trust Authority

Your agency, or a partnering agency, has identified a strategic plan for:

- Continued funding
- Increasing the levels of services
- Increasing the accessibility statewide
- Integrating TBI Resource Facilitation into your State Action Plan

What strategies are used to elicit funding from policymakers?

Legislative committees

Awareness and fundraising activities

Personal meetings with Legislators

Utilization of data to demonstrate the need

Review of State Action Plan

How does your TBI Resource Facilitation Service track data?

- Written notes
- Word document or other computer file document
- Database program used: Excel

Do you collect follow-up data?

No

How do you determine the individual has reached the desired outcome?

Haven't found a mechanism yet.

Resource Facilitation for individuals with brain injury and family members is known by many names. What is it called in your State?

- Resource Facilitation
- Brain Injury RF, TBI Grant RF, TBI RF

Which services are provided by your State's TBI Resource Facilitation for individuals with brain injury and family members?

Assessment	Training
Planning	Information & Referral Support
Identification of Resources	1-800 helpline
Negotiation	2-1-1 system
Monitoring	Public Awareness
Reassessment	Creation of Educational Materials
Follow-up	Distribution of Educational Materials
Employment Support	Resource Library
Educational Support	Benefits Assistance
Support Groups	Crisis Management
Case Management	

How does your TBI Resource Facilitation Service implement person and family directed services?

- Individuals with a brain injury and/or family member identify goals in a written plan with the TBI Resource Facilitator
- Individuals with a brain injury and/or family member periodically complete a survey of individual services provided
- Individuals with a brain injury and/or family members participate in the evaluation of the TBI Resource Facilitation program
- There is a stakeholders' advisory group which reviews activities, surveys, etc.
- Other (please specify) - One Resource Facilitator is a caregiver for a family member w/ a BI

Which agencies/groups are responsible for planning TBI Resource Facilitation in your State?

- TBI Lead Agency
- State Brain Injury Association (BIA) affiliated with Brain Injury Association of America
- State TBI Advisory Board/Council
- Staff from the Rehabilitation Hospital of Indiana (RHI), site of participant recruitment

Which agencies/groups are responsible for delivering TBI Resource Facilitation Services?

- TBI Lead Agency
- State Brain Injury Association (BIA) affiliated with the Brain Injury Association of America
- Staff from the Rehabilitation Hospital of Indiana (RHI), site of participant recruitment

What is the point of entry/access to TBI Resource Facilitation Services?

RHI's clinical staff involved in the RF Pilot Project/Study - Neuropsychologists, Social Worker,

What is the method for delivering resource facilitation services?

Meeting and phone

Please indicate the number of people who received resource facilitation services in calendar year 2007.

Number of individuals served - 0

Please indicate the number of staff in your State who provide TBI Resource Facilitation for each that apply.

Paid staff part time - 2

How is TBI Resource Facilitation funded in your State?

State General Revenue

Federal funding

Medicaid

TBI Waiver

Contractor: 2-1-1 System

Our RF Pilot Program is part of our US DHHS HRSA

TBI Grant (VR checked just #2 federal funding - P & A checked all others that are checked above)

Vocational Rehabilitation

Aging and Long-term Care Services

School Districts

Veterans Service Organizations

Department of Developmental Disabilities

Your agency, or a partnering agency, has identified a strategic plan for:

- Increasing the levels of services
- A Strategic Plan may be developed in the next several months

What strategies are used to elicit funding from policymakers?

- Utilization of data to demonstrate the need
- To be developed

How does your TBI Resource Facilitation Service track data?

- Written notes
- Word document or other computer file document
- Indiana developed a database specifically for this RF Pilot Project/Study

Do you collect follow-up data?

Yes, Contact attempted every 2 weeks with individual with a BI or with Family Member/Caregiver/Care Partner (P & A checked yes and wrote in "weekly", and "client satisfaction surveys upon closure of services.")

How do you determine the individual has reached the desired outcome?

- Satisfaction survey
- Exit interview
- Attainment of agreed upon goals
- The person with a brain injury has re-entered employment or education
- The family member has been able to maintain education/employment
- P & A checked last box and wrote" client is contacted via phone with thank you.")

2-1-1 system	Discharge process from hospital or rehabilitation facility
TBI Lead Agency	Other State Agency
TBI Registry administered by the MN Dept. of Health; contact made to offer "RF" the 'program'	

What is the method for delivering resource facilitation services?

- Telephone from one statewide location
- Telephone from multiple locations
- One-on-one
- Web based

Please indicate the number of people who received resource facilitation services in calendar year 2007.

Number of individuals served – 3300

Please indicate the number of staff in your State who provide TBI Resource Facilitation for each that apply.

- Volunteer staff part time - 2
- Paid staff full time – 8

How is TBI Resource Facilitation funded in your State?

Federal funding	Vocational Rehabilitation
TBI Trust Fund	Aging and Long-term Care Services
Medicaid	School Districts
TBI Waiver	Workers Compensation
Medicaid Waiver	County Systems
Contractor: BIA Affiliate	Private Sources
Contractor: 2-1-1 System	Indian Health Services
Family Support Dollars	Veterans Service Organizations
Department of Mental Health	No-Fault Auto Insurance
Department of Substance Abuse and/or Addictions	Insurance
Department of Developmental Disabilities	Developmental Disabilities Planning Council

Responses for this item relate to all "RF" options; not just "RF" the 'program'. "RF" the 'program' is covered by TBI Dedicated Funds. "Federal Funds" relates to TBI P&A Grant through HRSA.

Your agency, or a partnering agency, has identified a strategic plan for:

- Continued funding
- Increasing the levels of services
- Increasing the accessibility statewide
- Integrating TBI Resource Facilitation into your State Action Plan

What strategies are used to elicit funding from policymakers?

- Legislative Committees
- Personal meetings with legislators
- Review of State Action Plan
- Awareness and fundraising activities
- Utilization of data to demonstrate the need

How does your TBI Resource Facilitation Service track data?

- Word document or other computer file document
- Database program used: Check with BIA of MN

Do you collect follow-up data?

- Yes, Weekly, Monthly, Bi-annually, Annually
- Comment: For "RF" the 'program', MDH contract with BIA of MN requires data reporting for up to 2 years, but BIA of MN may continue "RF" for someone per their request - longer than that; data continues to be collected and could be queried for reports.

How do you determine the individual has reached the desired outcome?

- Satisfaction survey
- Exit interview
- One on one interview
- Attainment of agreed upon goals
- The person with a brain injury has re-entered employment or education
- The family member has been able to maintain education/employment
- For "RF" the 'program', per person's stated choice

Resource Facilitation for individuals with brain injury and family members is known by many names. What is it called in your State?

- Information & Referral (I&R)
- Resource Facilitation
- Resource Coordination

Which services are provided by your State's TBI Resource Facilitation for individuals with brain injury and family members?

Assessment	Training
Planning	Information & Referral Support
Identification of Resources	1-800 helpline
Negotiation	Public Awareness
Monitoring	Outreach to Target Populations
Reassessment	Distribution of Educational Materials
Follow-up	Resource Library
Employment Support	Electronic Media Outreach (TV/Radio)
Educational Support	Web based services
Mentoring/Peer Support	Benefits Assistance
Support Groups	Crisis Management
Participation in Volunteer Activities	

How does your TBI Resource Facilitation Service implement person and family directed services?

- Individuals with a brain injury and/or family member identify goals in a written plan with the TBI Resource Facilitator
- There is a stakeholders' advisory group which reviews activities, surveys, etc.

Which agencies/groups are responsible for planning TBI Resource Facilitation in your State?

- TBI Lead Agency
- State Brain Injury Association (BIA) affiliated with Brain Injury Association of America
- State TBI Advisory Board/Council
- Volunteers
- Montana Center on Disabilities (TBI grant partner)

Which agencies/groups are responsible for delivering TBI Resource Facilitation Services?

- State Brain Injury Association (BIA) affiliated with the Brain Injury Association of America

What is the point of entry/access to TBI Resource Facilitation Services?

Toll free helpline	Other State Agency
2-1-1 system	State Affiliate BIA
TBI Lead Agency	Discharge process from hospital or rehabilitation facility

What is the method for delivering resource facilitation services?

- Telephone from one statewide location
- One-on-one

Please indicate the number of people who received resource facilitation services in calendar year 2007.

Number of individuals served - 479

Please indicate the number of staff in your State who provide TBI Resource Facilitation for each that apply.

Paid staff full time - 1

How is TBI Resource Facilitation funded in your State?

- State General Revenue
- Contractor: BIA Affiliate
- Contractor: State Protection & Advocacy System
- Aging and Long-term Care Services
- Private Sources

Your agency, or a partnering agency, has identified a strategic plan for:

- Increasing the levels of services
- Increasing the accessibility statewide

What strategies are used to elicit funding from policymakers?

- Personal meetings with Legislators
- Awareness and fundraising activities
- Utilization of data to demonstrate the need

How does your TBI Resource Facilitation Service track data?

- We do not collect data
- Database program used: list - BIA Database

Do you collect follow-up data?

- Yes, Bi-annually

How do you determine the individual has reached the desired outcome?

- Satisfaction survey
- Exit interview
- One on one interview

- As a participant driven program the achievement of desired outcomes are determined in collaboration with the facilitator and participant.

Organization

Brain Injury Association of Ohio
855 Grand View Avenue, suite 225
Columbus, OH 43215- 1123

Resource Facilitation for individuals with brain injury and family members is known by many names. What is it called in your State?

- Information & Referral (I&R)
- Resource Facilitation
- Service Coordination
- Resource Coordination
- Case Management

Which services are provided by your State's TBI Resource Facilitation for individuals with brain injury and family members?

Assessment	Training
Planning	Information & Referral Support
Identification of Resources	1-800 helpline
Negotiation	Public Awareness
Monitoring	Outreach to Target Populations
Reassessment	Creation of Educational Materials
Follow-up	Distribution of Educational Materials
Employment Support	Resource Library
Educational Support	Electronic Media Outreach (TV/Radio)
Mentoring/Peer Support	Web based services
Support Groups	Benefits Assistance
Participation in Volunteer Activities	Crisis Management
Case Management	

How does your TBI Resource Facilitation Service implement person and family directed services?

- Individuals with a brain injury and/or family member identify goals in a written plan with the TBI Resource Facilitator
- Individuals with a brain injury and/or family member periodically complete a survey of individual services provided
- Individuals with a brain injury and/or family members participate in the evaluation of the TBI Resource Facilitation program
- There is a stakeholders' advisory group which reviews activities, surveys, etc.
- Education and advocacy efforts inform individuals with BI about services and supports, how to access and advocate for what they need. Increasingly, individuals with BI and their families are encouraged to work through established, inter-governmental collaborative groups to address their individual needs. (For example, Ohio's Family & Children First Councils & Dual Diagnosis Task Force groups)

Which agencies/groups are responsible for planning TBI Resource Facilitation in your State?

TBI Lead Agency
State Brain Injury Association (BIA) affiliated with Brain Injury Association of America
State TBI Advisory Board/Council
State Protection and Advocacy System
Ohio's TBI Model Systems Program at the Ohio State University
Volunteers

Which agencies/groups are responsible for delivering TBI Resource Facilitation Services?

- Other State Agency(ies)
- State Brain Injury Association (BIA) affiliated with the Brain Injury Association of America
- State Protection and Advocacy System
- Providers

What is the point of entry/access to TBI Resource Facilitation Services?

- Toll free helpline
- State Brain Injury Association Affiliated with Brain Injury Association of America
- Ohio's single pt of entry is a statewide toll-free helpline operated by the Brain Injury Association of Ohio. However, some of the 2-1-1 programs refer people to the Helpline as do other State Agencies, including the TBI Lead Agency, as well as some hospital or rehab discharge planners

What is the method for delivering resource facilitation services?

No Response

Your agency, or a partnering agency, has identified a strategic plan for:

No Response

What strategies are used to elicit funding from policymakers?

No Response

How does your TBI Resource Facilitation Service track data?

Database program used: list - FileMaker

Do you collect follow-up data?

Yes. For Ohio's Helpline & CSN office components of its RF system, info is recorded on the response (assistance & information) the person received following their request/contact with the Brain Injury Association. Staff members call back on an as-needed-basis to check in with people, encourage them to attend a support group, training, what-have-you. Also, staff attend, lead or provide T.A. to support groups where they have an opportunity to inter-act with a good number of "our constituents". Individuals who have contacted BIAOH's Helpline or CSN offices are added to the organization's mailing list to receive notices about upcoming events, newsletters, etc. The concept being that we are building something of a community around them at the same time encouraging them to participate in the larger community

How do you determine the individual has reached the desired outcome?

- Satisfaction survey
- Attainment of agreed upon goals
- Staff members respond to specific requests/needs presented by providing various forms of assistance. Typically, they will reiterate what they have agreed to do on the person's behalf, and in best case scenarios, record that in their "I & R" file. Once they have followed through with these activities, and ascertained that they have achieved the necessary "linkage" in regard to programs, services, support and/or education opportunities, they close the file as complete. Randomly, individuals receive customer satisfaction surveys in the mail. Data from the surveys is compiled. Service ratings have been consistently positive. Sometimes those receiving the form identify additional needs, or dissatisfaction with services. That results in BIAOH's Ex. Dir., or her designee, following up.

Resource Facilitation for individuals with brain injury and family members is known by many names. What is it called in your State?

- Information & Referral (I&R)
- We sometimes also refer to it as crisis case management

Which services are provided by your State's TBI Resource Facilitation for individuals with brain injury and family members?

Assessment	Information & Referral Support
Planning	1-800 helpline
Identification of Resources;	Public Awareness
Support Groups	Outreach to Target Populations
Participation in Volunteer Activities	Creation of Educational Materials
Electronic Media Outreach (TV/Radio)	Distribution of Educational Materials
Benefits Assistance	Resource Library
Web based services	Crisis Management
Training	

How does your TBI Resource Facilitation Service implement person and family directed services?

Survivors are an integral part of our board of directors, each person who receives a packet of information is sent a satisfaction survey to return to us. We survey support group leaders, members, and survivors and families on our mailing list, we provide conference scholarships for families & survivors and ask for their feedback.

Which agencies/groups are responsible for planning TBI Resource Facilitation in your State?

State Brain Injury Association (BIA) affiliated with Brain Injury Association of America

Which agencies/groups are responsible for delivering TBI Resource Facilitation Services?

State Brain Injury Association (BIA) affiliated with the Brain Injury Association of America

What is the point of entry/access to TBI Resource Facilitation Services?

Toll free helpline	Discharge process from hospital or rehabilitation facility
TBI Lead Agency	schools
Other State Agency	DVR
State Affiliate BIA	Dept of health
Independent living programs	We get referrals from doctors, lawyers, rehab staff, out of state, website etc.

What is the method for delivering resource facilitation services?

- Telephone from one statewide location
- We also sometimes answer requests for I&R online from e-mail requestors.

Please indicate the number of people who received resource facilitation services in calendar year 2007.

Number of individuals served - 377

Please indicate the number of staff in your State who provide TBI Resource Facilitation for each that apply.

Paid staff full time - 2

How is TBI Resource Facilitation funded in your State?

- Contractor: BIA Affiliate
- Department of Developmental Disabilities
- Vocational Rehabilitation
- Independent Living Council

Your agency, or a partnering agency, has identified a strategic plan for:

- Increasing the accessibility statewide
- Integrating TBI Resource Facilitation into your State Action Plan
- Other (please specify) - working on continued funding, increased funding, and decreasing dependence on grants

What strategies are used to elicit funding from policymakers?

None at this time

How does your TBI Resource Facilitation Service track data?

- Written notes
- Word document or other computer file document
- Database program used: list - We use Excel spreadsheets at the moment, but have been working for several months on a custom program to track information

Do you collect follow-up data?

No, But those who return for more help will have a case file opened and we will help them as long as they continue to ask

How do you determine the individual has reached the desired outcome?

- Satisfaction survey
- Attainment of agreed upon goals
- We know we need to start tracking outcomes. But we have always offered to leave the door open so people can come back for more help. Although we served 377 new referrals last year, we had more than 1500 calls for information. We add new info to the original referral, and note progress made.

VI. RESOURCE FACILITATION SURVEY INSTRUMENT

Survey of Resource Facilitation Services for Individuals with TBI and Family Members

For purposes of this survey we are using the following definition.

Resource Facilitation for Individuals with TBI and Family Members begins with the basic process of assessing an individual's needs and the provision of the information and referral. Dependent upon the availability of resources, Resource Facilitation may also include advocating for, obtaining, and accessing services and supports, routine follow-up, and reassessment to determine additional needs, the efficacy of existing services and supports and/or the termination of services.

Resource Facilitation – Administrative & Operational Overview

1. Person responding to the Survey
Name _____
Organization _____
State/Territory _____
Email Address _____
Phone Number _____
2. Is Resource Facilitation for individuals with brain injury and family members provided in your State?
 - No
 - Yes
3. Resource Facilitation for individuals with TBI and family members is known by many names – What is it called in your State? Check all that apply.
 - Information and Referral (I & R)
 - Resource Facilitation
 - Neuro Resource Facilitation
 - Service Coordination
 - Care Coordination
 - Resource Coordination
 - Resource Navigator
 - Case Management
 - Targeted Case Management
 - Collaborative of Stakeholders
 - Other_(Please Specify)_____
4. What resources did you use to develop your State's TBI Resource Facilitation Services? Check all that apply.
 - Identification of needs in the State through a Needs & Resources Assessment
 - Resource Facilitation: A Consensus of Principles and Best Practices to Guide Program Development and Operation in Brain Injury; May 2001

- Consultation with other programs: _____
- Consultation with other States: _____
- Other _____

5. Which of following services are provided by your State's TBI Resource Facilitation for Individuals with brain injury and family members? Check all that apply.

- Assessment
- Planning
- Identification of Resources
- Negotiation
- Monitoring
- Reassessment
- Follow-up
- Employment Support
- Educational Support
- Mentoring/Peer Support
- Support Groups
- Participation in Volunteer Activities
- Case Management
- Training
- Information & Referral Support
- 1-800 helpline
- 2-1-1 system
- Public Awareness
- Outreach to Target Populations
- Creation of Educational Materials
- Distribution of Educational Materials
- Resource Library
- Electronic Media Outreach (TV/Radio)
- Web based services
- Benefits Assistance
- Crisis Management
- Financial Planning

6. Are Resource Facilitation services provided: Check all that apply.

- Statewide
- Regional
- County
- Local
- Other (Please specify) _____

7. How does your TBI Resource Facilitation Service implement person and family directed services? Check all that apply.
- Individuals with a brain injury and/or family identify goals in a written plan with the TBI Resource Facilitator
 - Individuals with a brain injury and/or family complete a survey of services provided at intervals
 - Individuals with a brain injury and/or family members participate in TBI Resource Facilitation program evaluation
 - There is a stakeholder's advisory group which reviews activities, surveys, etc.
 - Other (Please specify) _____
8. Which of the following are responsible for **planning** TBI Resource Facilitation in your State? Check all that apply.
- TBI Lead Agency
 - State Brain Injury Association (BIA) – affiliate of Brain Injury Association of America
 - State TBI Advisory Board/Council
 - Trust Fund Board
 - State Protection and Advocacy System
 - Volunteers
 - Other (Please specify) _____
9. Which of the following are responsible for **delivering** TBI Resource Facilitation Services? Check all that apply.
- TBI Lead Agency
 - Other State Agencies
 - State Brain Injury Association (BIA) – affiliate of Brain Injury Association of America
 - State Protection and Advocacy System
 - Providers
 - Volunteers
 - Other (Please specify) _____
10. With what agencies/organizations has your TBI Resource Facilitation Program established some type of a contractual relationship? Please list _____
11. With which agencies/organizations has your TBI Resource Facilitation Program established some type of contractual relationship? Please list _____
12. Does your TBI Resource Facilitation have eligibility requirements?
- No
 - Yes, Check all that apply.
 - All individuals with brain injury are eligible
 - Based on level of severity of brain injury
 - Based on level of functional status
 - Proof of residency
 - Financial eligibility requirements

- Other_(Please specify)_____

13. What is the point of entry/access to TBI Resource Facilitation Services? Check all that apply.

- Toll free helpline
- 2-1-1 system
- TBI Lead Agency
- Other State Agency
- Chartered State Brain Injury Association Affiliate
- Discharge process from hospital or rehabilitation facility
- Other_(Please specify)_____

14. What is the process for the initial assessment? Check all that apply.

- Telephone
- Office Visit
- Home Visit
- Hospital or Rehabilitation Facility Visit
- Mail Survey
- Other (Please specify)_____

15. What is the method for delivering resource facilitation services? Check all that apply.

- Telephone from one statewide location
- Telephone from multiple locations
- One-on-one
- Web based
- Other Please specify_____

16. Please indicate the number of people who received resource facilitation services in calendar year 2007.

- Number of individuals served

17. Please indicate the number of staff in your State who provide TBI Resource Facilitation. Check all that apply.

- Volunteer staff part-time
- Volunteer staff full-time
- Paid staff – part time
- Paid staff – full time

18. Does your TBI Resource Facilitation Service have educational materials that other state resource facilitation services could utilize?

- No
- Yes

19 .Does your TBI Resource Facilitation Program have a risk management policies and procedures?

- No
- Yes

Funding, Sustainability & Strategic Planning

20. How is TBI Resource Facilitation funded in your State? Check all that apply.

- State General Revenue
- Federal Funding
- TBI Trust Fund
- Medicaid
- TBI Waiver
- Medicaid Waiver
- Contractor: BIA Affiliate
- Contractor: State Protection & Advocacy System
- Family Support Dollars
- Department of Mental Health
- Department of substance Abuse and/or Addictions
- Department of Developmental Disabilities
- Development Disabilities Planning Council
- Vocational Rehabilitation
- Aging and Long-term Care Services
- Workers Compensation
- County Systems
- Private Sources
- Indian Health Services
- Veterans Service Organizations
- No-Fault Auto Insurance
- Insurance
- Other (Please specify) _____

21. To fund TBI Resource Facilitation do you use. Check all that apply.

- Sole source funding – funding from one source
- Leveraged funding – using TBI specific funding to influence commitment from other sources toward TBI specific services
- Braided funding – funding from more than one source which pays for different components for service delivery
- Blended or pooled funding – funding from more than one source which is pooled to support staff and services

22. Has your agency, or a partnering agency, identified a strategic plan for: Check all that apply.

- Continued funding
- Increasing the levels of services
- Increasing the accessibility statewide
- Integrating TBI Resource Facilitation into your State Action Plan
- Other (Please specify) _____

23. What strategies are used to elicit funding from policy makers? Check all that apply.

- Legislative Committees
- Personal meetings with legislators
- Review of State Action Plan
- Awareness and fund raising activities
- Utilization of data to demonstrate the need
- Other (Please specify)_____

Data Collection

24. How does your TBI Resource Facilitation Service track data? Check all that apply.

- We do not collect data
- Written notes
- Word document or other computer file document
- Database program used: (list)_____

25. How did you determine what data was to be collected? Check all that apply.

- By consulting other Resource Facilitation programs
- Needs and Resources Assessment
- By consulting written materials on Resource Facilitation
- Other (Please specify)_____

26. What demographic information do you collect? Check all that apply.

- Age
- Gender
- Marital Status
- Race/language
- Residency/county
- Type of injury
- Date of injury
- Medical history
- Other (Please specify)_____

27. In which of the following categories does your program collect information on the individual with a brain injury? Check all that apply.

- Life satisfaction
- Access to information
- Ability to make informed choices
- Ability to access natural supports
- Employment
- Education
- Functional independence in home and community
- Personal and family adjustment
- Other (Please specify)_____

28. Do you collect caregiver/family data?

- No
- Yes, if yes, what life domains do you measure? Check all that apply.
 - Ability to maintain pre-injury employment or education (when applicable)
 - Satisfaction with life
 - Adjustment/coping skills
 - Resources utilized
 - Other(Please specify) _____

29. Do you collect follow-up data?

- No
- Yes, if yes, how often is follow-up data collected? Check all that apply.
 - Weekly
 - Monthly
 - Bi-Annually
 - Annually
 - Other: (Please specify) _____

30. How do you collect data? Check all that apply.

- Telephone
- Office Visit
- Home Visit
- Survey
- Other (Please specify) _____

31. How do you determine the individual has reached the desired outcome? Check all that apply.

- Satisfaction survey
- Exit interview
- One-on-one interview
- Attainment of agreed upon goals
- The person with a brain injury has re-entered employment or education
- The family member has been able to maintain education/employment
- Other (Please specify) _____

VII. ABSTRACT

PROSPECTIVE RANDOMIZED CONTROLLED TRIAL OF RESOURCE FACILITATION ON COMMUNITY PARTICIPATION AND VOCATIONAL OUTCOME FOLLOWING BRAIN INJURY

**FUNDED IN PART BY
HEALTH RESOURCES AND SERVICES
ADMINISTRATION, MATERNAL CHILD
HEALTH FEDERAL TBI
IMPLEMENTATION PARTNERSHIP GRANT
2006-2009**

**Has been accepted for publication at a future date in
the *Journal of Head Trauma Rehabilitation*.**

Prospective Randomized Controlled Trial of Resource Facilitation on Community
Participation and Vocational Outcome following Brain Injury

Abstract

Trexler, LE, Trexler, LC, Klyce, D. and Parrott, D. (in preparation). Prospective Controlled Randomized Study of Resource Facilitation on Vocational Outcome following Brain Injury.

Objective: The impact on return to work after brain injury has been noted to be devastating. Several literature reviews have demonstrated that unemployment after traumatic brain injury was greater than 60% (Wehman, 1993), and may be 90% or higher for people with moderate to severe brain injury (Ben-Yishay et al., 1987). **Method:** A total of 23 people with acquired brain injury and their caregivers were recruited and randomly assigned to a resource facilitation (RF) treatment group, or a regular follow-up, control group. All participants received standard follow-up services, but participants in the RF group were also assigned a resource facilitator to assist the participants in returning to work. **Results:** After six months, 67 % of the participants in the RF group had returned to work compared to 36 % in the control group. A between-subjects univariate analysis of covariance fixed effects model demonstrated a significant difference ($F = 27.67, p < .000$) between the groups. **Conclusion:** Services framed as “resource facilitation” that have a clear focus on return to work may have a substantial impact on rate of unemployment after brain injury. **Keywords:** *acquired brain injury, resource facilitation, vocational rehabilitation, rehabilitation*
